

AK Consultants, formerly Armstrong Agricultural Services has been helping rural Tasmania since 1987. We are a small team of dedicated people committed to providing the highest standard in agricultural and land & water management services in Tasmania.

Whilst initially our emphasis was on farm business management and rural land-use management there is now a greater environmental component to our services with specific emphasis on environmental planning.

AK Consultants is a family friendly business and encourages flexible working arrangements. We currently have five employees with each bringing unique skills to the business. While each one of the employees provides expertise in particular fields there is also a high degree of team work and we often team up with other consultants to provide the skill mix required to deliver larger projects.

AK Consultants employees operate within a policy framework as specified in the Code of Ethics for the Australian Institute of Agricultural Sciences and Technology and Environment Institute of Australia and New Zealand (see AIAST & EIANZ Code of Ethics).

Our Business

- Farming Businesses – help farmers to grow and operate environmentally sustainable and financially rewarding farming businesses.
- Rural landholders – help them to meet government regulatory requirements in relation to development proposals.
- Government agencies and corporations – help them in their interactions with farmers and rural landholders.

We provide assessment and planning services and advice.
